FLOW LIKE WATER AND THRIVE

We are happy to have partnered with Gardening
Responsibly Organisation

Gardening responsibly is about being able to enjoy not only beautiful gardens, but also habitats that we conserve and create. It is important that we conserve our healthy Australian landscapes, and to help us all to participate in this, we have partnered with Gardening responsibly.

Choosing what plants to plant is not always easy. We recommend selecting Endemic plants and Native plants; however, there are ornamental plants that have been assessed through Gardening Responsibly and, as a result of extensive research, have been found to have low future-invasive risk to help guide your way.

\$13.6 billion per year

The combined cost of
invasive species is a
significant economic burden
on Australians.

**More than 207
invasive plants
affect 1,257
threatened and
endangered
species in Australia**

1,257

The **six most**
common
weeds
cover an
area three
times
the size of
Tasmania
(20 million hectares)

Gardening
RESPONSIBLY Plant Sure

In Australia, garden plants
continue to naturalise, or
'jump the garden fence',
and become invasive.

20 new plant
naturalisations
each year

Gardening
RESPONSIBLY Plant Sure

72%

of weed species were
accidentally introduced
as garden ornamentals!
